DETAILED ACTION

1. This communication is responsive to your preliminary amendment filed June 28, 2002. Claims 1-16 have been canceled. Claims 17-37 are currently pending in this application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 17-37 are rejected under 35 U.S.C. 102(e) as being anticipated by Belt et al. P.N. 6,323,648 (Belt).

Belt discloses a peripheral vascular array for Magnetic Resonance Imaging. Applicant's attention is directed to Fig. 1 and corresponding description. Interface 20 allows for the connection of the NMR scanner 30 to an imaging coil array 10 in a number of combinations or different operating modes. Note that there are at least two receiving circuits and that the number of coils is greater than the number of receiving circuits by at least one.

Belt meets all the limitations of the claims at issue.

Art Unit: 2862

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Burl and Zou et al. both disclose MRI coil systems capable of multi-mode operation. Note the abstract of each of the disclosures.
